

Youht ideas from Autumn Youth Event

Circular economy

Our impact on the environment & the biggest problems

01

lack of knowledge

People often don't realize how important their daily choices are. We often do not pay attention to either the quantity or the materials from which the products come from

02

plastic and CO2

Often, products are packed individually in plastic bags, but huge amounts of carbon dioxide are produced during transport

03

costs

new, greener solutions are often very costly and less profitable for entrepreneurs and producers

How do young people want to solve this?

01

Education & social campaigns

In our opinion, every big change starts with a change of mind. In Poland, we say "What little Johnny won't learn, John won't know "

03

costs

Corporate subsidies and tax breaks can help new and smaller businesses and encourage already large companies to change policy

02

plastic and CO2

Change in the way clothing is transported - elimination of plastic packaging in favor of biodegradable plastics.

Innovative ideas of young people

- ★ Organization of projects supporting the exchange of clothes and everyday objects.
- ★ Popularization of points with the possibility of donating used clothing

Thanks!!
